

ProSite

Logistics platform for inventory challenges

Manufacturer Chemical Support Systems (CSS) Ltd.

Efficient stock management solution that prevents human error and offers automated just-in-time inventory management.

Efficient and cost-effective stock management

Chemical Support Systems (CSS) Ltd., a long-established chemical dosing equipment manufacturer based in Winsford, UK, uses piping and related products to build solutions for chemical dosing skid OEMs. CSS was looking for an efficient and cost-effective stock management that allows them to focus on what they do best: providing specialized solutions to meet their customers' needs. ProSite by GF Piping Systems was the solution.

Project background

Having been poorly served by its previous supply chain solution – resulting in issues with stock availability due to long lead times for critical day-to-day components, valves and fittings required for custom-build projects – CSS agreed to act as a pilot site for the rollout of a digital logistics solution designed to combat these issues. Due to a long standing relationship they decided to choose GF Piping Systems who was the only company who would provide the right solution for CSS.

Selected technical solution

GF Piping Systems' ProSite was chosen because the platform is specially designed to prevent supply chain failures such as out-of-stock situations, while at the same time avoiding the problems that arise from capital being tied up in surplus stock holdings. For CSS it brings the full range of stock management functionalities together in a single software solution, giving the company an end-to-end control of all stock thanks to automated just-in-time inventory management.

Achieved improvement

With ProSite, CSS could control the stock it needed to cover a wide range of products more effectively than before. Without having to wait for missing components, CSS can now provide more efficient support to skid manufacturers. The top three benefits of the new solution for CSS were easier booking-in and re-ordering of stock, and improved stock availability. These benefits had the additional knock-on effect of helping to bring about an overall reduction in production time and costs.

A dashboard provides visibility over stock needs and simplifies the ordering.

Inbound & outbound tracking in a simple but professional way.

Customer benefits

- Complete visibility of all stock
- Reduced paperwork
- Reduced personnel costs
- Simpler ordering and re-ordering processes
- Savings in freight forwarding costs
- Increased efficiency (by up to 15%)
- Up to 20% time saving on administrative tasks
