

# Do you know our tools and accessories for improving your PE electrofusion connection?

## + Rotary Peelers

- Peeling tools remove the oxidation layer of PE pipes accurately with low effort and high reliability
- We offer peeling tools for pipe end peeling and preparing saddle joints from d20 up to 2000 mm

## + Cleaning Agents

- Cleaning of PE pipes is an essential quality assurance during the fusion procedure
- We offer special cleaner for plastic fusion connections. Available in form of Tangit liquid and Tangit cleaning tissues (Ethanol 99.8 %)
- DVGW approved (VP 603)

## + Clamping and Alignment Tools

- Clamping tools are designed to hold pipes in place during the entire electrofusion process to avoid any movement caused by heat expansion or physical disturbance
- In addition to straight executions with 2 or 4 clamps we also offer tools for the installation of elbows, tees and reducers

## + Re-rounding Tools

- The tools enable mechanical re-rounding of out-of-roundness PE pipes for fusion preparations
- Facilitate installation and improve connection quality
- Recommended for installation of EF couplers and EF saddles
