

# Little effort. Big improvements.

### Intelligent platform

Integrated pilot valve to optimize pressure regulation and optional integrated equipment to remotely monitor flow, and water quality.

### Versatile flow control

Water utilities can now easily implement pressure control technology to benefit from a protected water network.

### Complete connectivity

Plug and Play hydraulic connection with our Multijoint 3000 Plus, forgiving differential ground settlement with maximum angular deviation.

### Application modifiable

Fully customizable to fit the most challenging installation conditions in the most cost-efficient way.

### Easy and safe maintenance

The station can be safely accessed and the valves simple light weight mechanical design ensure the shortest possible service time.

### No actuator stem or diaphragm

Significantly reduced complexity. Low maintenance requirements due to very simple design with few components and no elastomer diaphragm.
