GF Corys extends its facility in Dubai for additional prefabrication capabilities

GF Corys aims to supply the Middle East with piping solutions that safeguard water resources, enhance energy efficiency, and reduce water loss. Now, the company's Dubai facility has been extended to 2,000m² – four times its original size – to offer a broader prefabrication portfolio in the region.

In addition to offering a wide range of flow solutions, GF Corys is capable of prefabricating thermoplastic components that are tailored to the specific needs of the customer. During the expansion of its facility, the company therefore installed an SWFM-630 Side Wall Fusion Machine by GF Piping Systems to meet the local demand for water treatment and desalination applications.

For these applications, customers previously relied on international prefabrication sites to source specialized thermoplastic components such as manifolds. As the first machine of its type in the region, the SWFM-630 now introduces additional capabilities that increase customer proximity, speed up projects, and avoid the CO₂ emissions associated with international shipping.

Bart Van Bastelaere, Managing Director at GF Corys, comments on the updated facility. "When it comes to protecting our water resources, desalination and water treatment technology are invaluable tools. We are therefore extremely pleased that we can locally produce crucial components for these applications that are made of long-lasting and corrosion-resistant thermoplastics. This reduces the workload for the customer and streamlines projects that add value to the region."

GF Corys, is focused on delivering world-class piping solutions across utilities, industry, and building technology to a dynamic Middle East landscape. Corys brings over 40 years of local knowledge and experience, an integral part of building much of the critical piping infrastructure. This expertise is now bolstered by the global technology, innovation, and scale of GF Piping Systems.

About GF Piping Systems

GF Piping Systems creates connections for life as the superior water and flow solutions provider for industries and infrastructure, enabling the safe and sustainable transport of fluids.

The division focuses on industry-leading leak-free piping solutions and engineering services for numerous demanding end-market segments. Its global sales, engineering, and manufacturing footprint reflects its strong focus on customer-centricity and innovation, and its award-winning portfolio includes fittings, valves, pipes, vaults, chambers, automation, fabrication, and jointing technologies.

GF Piping Systems has its own sales companies in 33 countries and fabrication hubs in 15 countries, which means it is always by its customers' side. Production sites in 40 locations in the Americas, Europe, the Middle East, and Asia ensure sufficient availability and quick, reliable delivery. In 2023, GF Piping Systems generated sales of CHF 2'100 million and employed 8'798 people. GF Piping Systems is a division of Georg Fischer AG (GF), founded in 1802 and headquartered in Schaffhausen (Switzerland).
